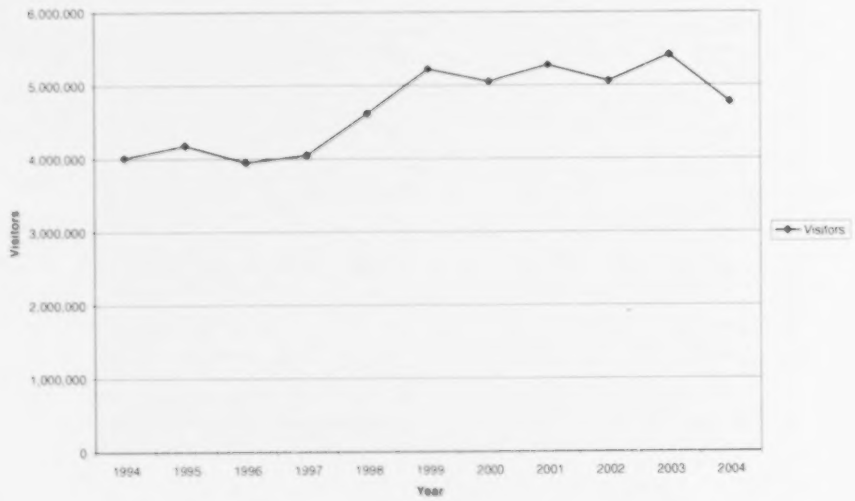
PARK VISITOR STATISTICS 1994 TO 2004

Provincial Park Visitors - 1994 to 2004



Manitoba

Building for the Future

105-05185/

FOREWORD

The year 2004 was the 35th year for visitor statistics to be collected in Manitoba Provincial Parks. Statistical information for the period 1994 through to 2004 is contained in this report, with park and campground-specific information provided in the Appendices.

Although many provincial parks remain open for public use year-round, reported statistics primarily address the summer season of May to September. Camping statistics include unit nights sold and occupancy rates, and are based upon permit and revenue remittances, occupied campsite counts and an annual campsite inventory. Vehicle attendance statistics are based upon figures collected from automatic traffic counters (estimates in the case of counter malfunctions) and information from periodic visitor surveys.

As of July 1, 2004 there were 79 provincial parks and 15 park reserves with a total combined land base of approximately 4.7 million hectares, or 7.1 percent of the total land base of Manitoba. Available sites totalled 5,916 in 2004 and included approximately 4,392 transient campsites (of which 2,737 or 62.3 percent were available for reservation) and 1,524 seasonal campsites. In terms of services, campsites were divided as follows: 3,666 (62.0 percent) basic, 2,025 (34.2 percent) electrical, 19 (0.3 percent) water & electrical and 206 (3.5 percent) full service sites.

In 2004, a total of 168,789 transient unit nights were sold. This was down 12.9 percent from the 2003 figure of 193,872 transient unit nights sold and up 1.8 percent from the average of 1994 through to 2003. Provincially, 2004 transient camping demand represented 33.1 percent of unit nights available. There were also 1,524 seasonal campsites sold in 2004 (down 0.3 percent from 2003 and up 8.4 percent from the average of 1994 through to 2003), representing an estimated 45,720 additional unit nights of camping use (for an estimated 214,509 total unit nights sold).

In terms of vehicle attendance, an estimated 1,362,581 vehicles were recorded entering Manitoba's provincial parks in 2004. This was down 11.8 percent from the 2003 figure of 1,545,358 recorded vehicles, and up 1.9 percent from the average of 1994 through to 2003. Assuming 3.5 persons per vehicle, park attendance was approximately 4.8 million visitors.

Over the period 1994 through to 2004 visitor volumes and camping unit night figures have been generally increasing. The noteworthy decreases in 2004 from figures reported in 2003 can be largely explained on the basis of weather. Environment Canada reports that the summer of 2004 in Manitoba was the coolest and wettest on record. Conversely, 2003 was a banner year for park visitation. Noted year-over-year percentage differences are therefore somewhat inflated from a trend perspective.

The Parks Reservation Service has also played a major role in noted increases in camping figures in recent years. In 2004, the Parks Reservation Service offered reservations in 38 campgrounds, 22 group use areas and two cabin locations through both a toll-free number and the Internet. The service has been responsible for an

observed shift in campground use over the past eight years. Traditionally lesser-used facilities are becoming busier, as customers opt for alternative locations as their first choices become unavailable. For stays of short duration, weather is becoming less of a factor because of the commitment that is made when making a reservation. In addition, a higher proportion of total unit nights is taking place on weekends, as the reservation service takes away the uncertainty of finding a campsite during busy times.

Inquiries regarding the statistics reported in this document or a further explanation of the methodology are welcomed. Copies of this publication are distributed to other Manitoba government agencies, park agencies across the country and selected libraries.

Inquiries should be directed to:

Linda Novak, Special Programs Co-ordinator

1.0 CAMPING STATISTICS METHODOLOGY

Camping statistics are based primarily upon information obtained from camping permits. These permits are issued via two systems:

- the Standard Camping Permit system; and
- the Self-Registration Permit system.

Camping Permits provide information on occupied unit nights and the type of campsite service used (basic, electrical or full service). Camping use figures are drawn from revenue remittance documentation summarized by the Licensing Section. Occupancy figures summarize weekday, regular weekend and long weekend demand and are produced from daily occupancy information submitted from campgrounds on Campground Use Reports. Reservation use is drawn directly from the Parks Reservation Service database.

It is important to note that in any self-registration system, non-compliance (i.e. campers not registering) can adversely affect the reliability of camping use statistics. This issue is normally addressed by compliance checks conducted by park staff.

2.0 VEHICLE ATTENDANCE METHODOLOGY

During the months of May to September, vehicle attendance statistics are based on figures collected from automatic traffic counters. Periodically it is necessary to observe vehicle traffic patterns and compare these observations to counts from the traffic counter. This determines the accuracy of the traffic counter, or alternatively, the magnitude of error in the counter's functions and what adjustment factor, if any, must be applied to the reported counter readings in order to produce a more accurate vehicle count. When traffic counter readings are not available, the total vehicle counts are supplemented by estimates.

3.0 GLOSSARY OF TERMS

Basic Site:	A designated campsite with basic service (not provided with electricity, sewer or water).
Electrical Site:	A campsite where electrical supply is available.
Water & Electrical Site:	A campsite where electrical and water hook-ups are available.
Fully Serviced Site:	A campsite where electrical, sewer and water hook-ups are available.

Group Use: Camping or day use by organized groups in formally designated areas.

Seasonal Camping: Road accessible camping where the permittee is authorized to occupy a designated campsite for the complete camping season. Sites are normally issued through a draw process. Units must be removed at the end of the season.

Transient Camping: Road accessible camping where the permittee is authorized to occupy a designated campsite for a period of one to twenty-one nights.

Unit Night: One campsite occupied for one night.

4.0 WEATHER AND OTHER FACTORS AFFECTING VISITATION

Environment Canada has reported that the summer of 2004 in Manitoba was the coolest and wettest on record.

Summer temperatures in Manitoba were below normal in 2004, with a recovery in September to higher than normal temperatures across the province (see Appendix A: Detailed Tables, page 21). Although the summer of 2004 was generally considered wet, precipitation levels fluctuated widely across Manitoba.

Regionally:

Winnipeg: Temperatures were approximately 3.2 degrees below normal during the May to August period, and recovered to 2.2 degrees above normal in September. Although overall seasonal precipitation was 3.6 mm's below normal, the months of May, August and September each reported an average of 55.6 percent above normal precipitation.

Brandon: Temperatures were approximately 3.1 degrees below normal during the May to August period, and recovered to 1.7 degrees above normal in September. Overall seasonal precipitation was up 18 mm's above normal. May reported 97.3 mm's above normal while June and September reported an average of 21.3 mm's of precipitation below normal.

Dauphin: Temperatures were approximately 2.6 degrees below normal during the May to August period, and recovered to 2.0 degrees above normal in September. The Dauphin area received significantly less seasonal precipitation than the rest of the province, with 55.5 mm's less than normal precipitation being reported. In contrast to this average figure, the months of May and

August received an average of 29.5 mm's of precipitation above normal.

The Pas: Temperatures were approximately 2.5 degrees below normal during the May to August period, and recovered to 1.2 degrees above normal in September. The Pas reported significantly more seasonal precipitation than the rest of the province, with 72.4 mm's more than normal precipitation being reported. Only the month of August reported less than normal precipitation (11.1 mm's below normal.

5.0 2004 CAMPING AND PARK VEHICLE PERMIT FEES

Camping fees vary between campgrounds depending on the availability of surcharged services such as modern washrooms, showers, hook-ups and complimentary firewood. Minimum nightly fees apply in the case of group camping.

Transient	Basic Sites	$7.00 to $14.00
	Electrical Sites	$11.00 to $17.00
	Electrical & Water Sites	$15.00 to $16.00
	Full Service Sites	$18.00
Group		$7.00 to $17.00 per unit
Seasonal	Basic Sites	$270.00 to $480.00
	Electrical Sites	$330.00 to $540.00
	Full Service Sites	$510.00 to $540.00

Park Vehicle Permits are required year-round in provincial parks.

Annual Park Vehicle Permits	Motor Vehicles (non buses)	$20.00
	Buses	$78.00
Casual Park Vehicle Permits (valid for 3 consecutive days)	Motor Vehicles (non buses)	$5.00
	Buses	$21.00

6.0 SYSTEM OF PROVINCIAL PARKS AND NATURAL AREAS

As of July 1, 2004 there were 79 provincial parks and 15 park reserves with a total combined land base of approximately 4.7 million hectares, or 7.1 percent of the total land base of Manitoba. These areas contribute to the conservation of our natural lands and cultural heritage, offer excellent camping, cottaging and other outdoor recreation opportunities, and contribute to Manitoba's economic well-being through tourism and resource development.

Together, Manitoba's provincial parks form the provincial park system. The purposes of this system are defined in *The Provincial Parks Act* as:

(a) to conserve ecosystems and maintain biodiversity;

(b) to preserve unique and representative natural, cultural and heritage resources, and;

(c) to provide outdoor recreational and educational opportunities and experiences in a natural setting.

The park system comprises areas intended primarily for recreation as well as areas that have an important role in protecting natural landscapes. Many of our larger parks serve a variety of purposes including protection, recreation and resource use.

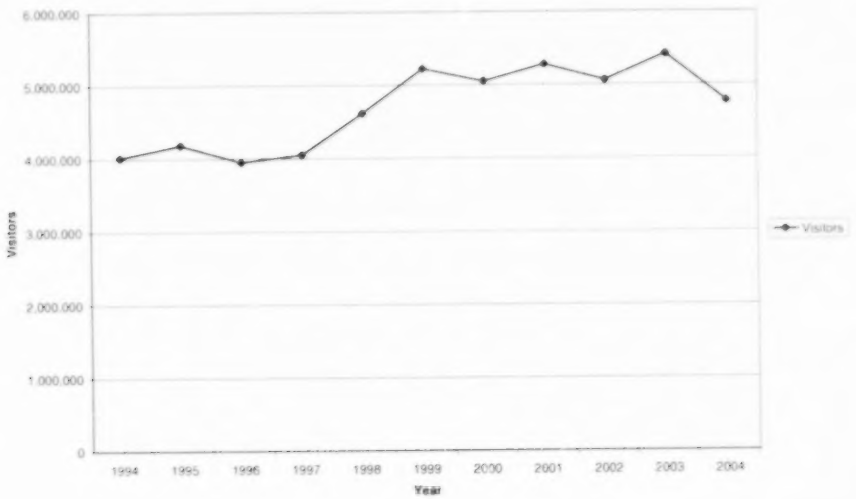
7.0 PROVINCIAL USE STATISTICS (VISITATION HIGHLIGHTS)

7.1 Park Visitors

An estimated 1,362,581 vehicles were recorded entering Manitoba's provincial parks in 2004 (down 11.8 percent from the 2003 figure of 1,545,358 recorded vehicles, and down 1.9 percent from the average of 1994 through to 2003).

Total visitor volumes to provincial parks, as recorded by vehicle counts (an average of 3.5 persons per vehicle is assumed), hovered around the 4 million mark for much of the 1990s. This was a drop from the figures reported in 1989 (4.3 million) and 1990 (4.5 million). Visitor volumes have rebounded since 1998, reaching a peak of 5.4 million in 2003. An estimated 4.8 million visitors were reported in 2004.

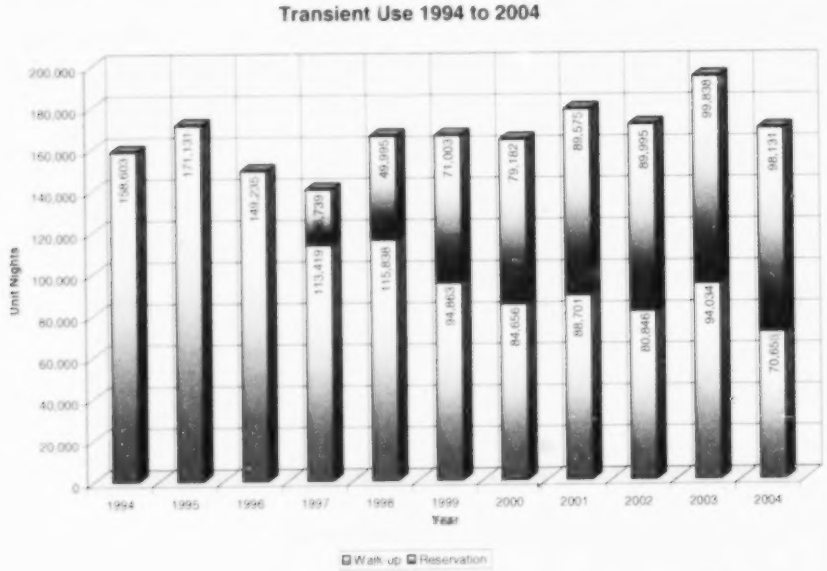
Provincial Park Visitors - 1994 to 2004



7.2 Transient Camping

In 2004, there were approximately 4,392 transient campsites in Manitoba provincial parks, of which 2,737 or (62.3 percent) were available for reservation. In terms of services, campsites were divided as follows: 2,805 (63.9 percent) basic, 1,490 (33.9 percent) electrical, 19 (0.4 percent) water & electrical and 78 (1 8 percent) full service sites.

A total of 168,789 transient unit nights were sold in 2004. This was down 12.9 percent from the 2003 figure of 193,872 transient unit nights sold and up 1.8 percent from the average of 1994 through to 2003. The noted decrease is blamed on the wettest and coolest summer on record across much of Manitoba.



Provincially, 2004 transient camping demand represented 33.1 percent of unit nights available. During the traditional peak demand period from the July long weekend through to the August long weekend, campground occupancy averaged 54.0 percent in 2004, with 75.0 percent occupancy on regular weekends and 73.1 percent on long weekends.

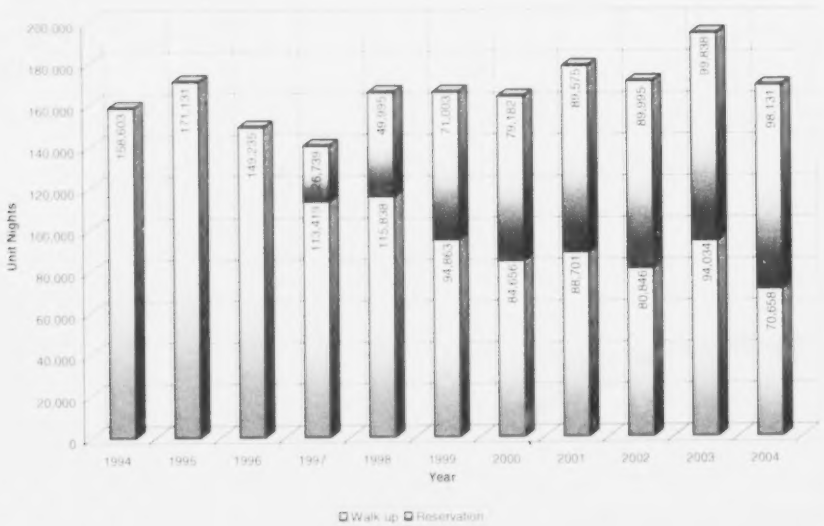
In reviewing trends in transient camping it is important to consider the impact of the Parks Reservation Service. Reservation volumes have grown significantly since the service was introduced in 1997, with 31,290 reservations (36,314 including cancelled or voided reservations) recorded in 2004. Included in this number are 29,785 transient camping reservations that accounted for 98,131 unit nights (58.1 percent of total transient unit nights), generating an average length of stay of 3.3 nights per reservation. In 2004, reservations were offered in 38 campgrounds, 22 group use areas and two cabin locations. The service has been responsible for an observed shift in campground use. Traditionally lesser-used facilities are becoming busier as customers opt for alternative locations, as their first choices become unavailable. For stays of short duration, weather is becoming less of a factor because of the commitment that is made when making

7.2 Transient Camping

In 2004, there were approximately 4,392 transient campsites in Manitoba provincial parks, of which 2,737 or (62.3 percent) were available for reservation. In terms of services, campsites were divided as follows: 2,805 (63.9 percent) basic, 1,490 (33.9 percent) electrical, 19 (0.4 percent) water & electrical and 78 (1.8 percent) full service sites.

A total of 168,789 transient unit nights were sold in 2004. This was down 12.9 percent from the 2003 figure of 193,872 transient unit nights sold and up 1.8 percent from the average of 1994 through to 2003. The noted decrease is blamed on the wettest and coolest summer on record across much of Manitoba.

Transient Use 1994 to 2004



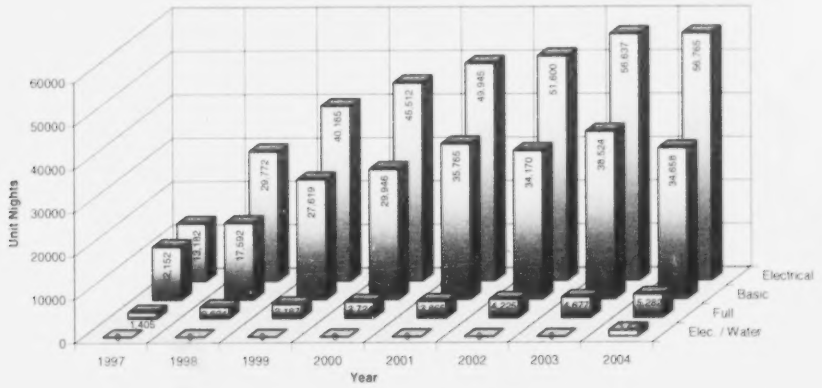
Provincially, 2004 transient camping demand represented 33.1 percent of unit nights available. During the traditional peak demand period from the July long weekend through to the August long weekend, campground occupancy averaged 54.0 percent in 2004, with 75.0 percent occupancy on regular weekends and 73.1 percent on long weekends.

In reviewing trends in transient camping it is important to consider the impact of the Parks Reservation Service. Reservation volumes have grown significantly since the service was introduced in 1997, with 31,290 reservations (36,314 including cancelled or voided reservations) recorded in 2004. Included in this number are 29,785 transient camping reservations that accounted for 98,131 unit nights (58.1 percent of total transient unit nights), generating an average length of stay of 3.3 nights per reservation. In 2004, reservations were offered in 38 campgrounds, 22 group use areas and two cabin locations. The service has been responsible for an observed shift in campground use. Traditionally lesser-used facilities are becoming busier as customers opt for alternative locations, as their first choices become unavailable. For stays of short duration, weather is becoming less of a factor because of the commitment that is made when making

a reservation. In addition, a higher proportion of total unit nights is taking place on weekends, as the reservation service takes away the uncertainty of finding a campsite during busy times.

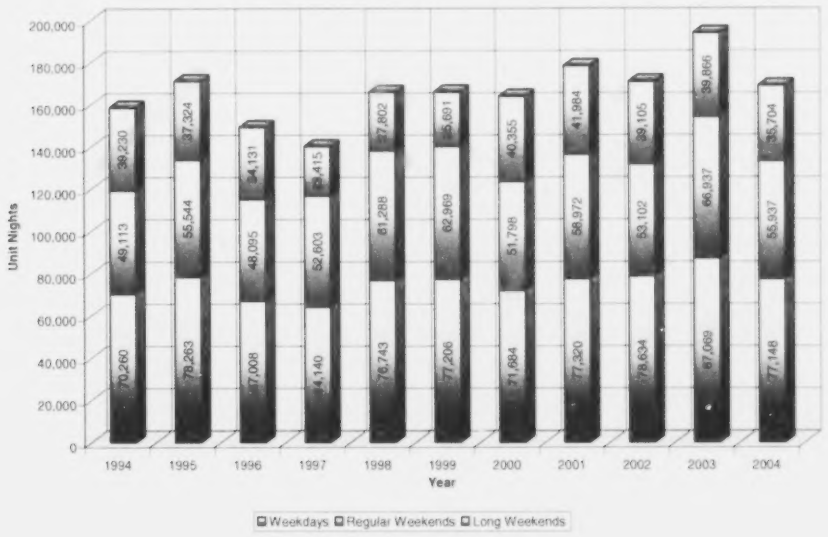
The Parks Reservation Service affords us the opportunity to examine the breakdown of transient unit nights on the basis of level of service. At 57.8 percent, demand for electrical sites continues to overshadow demand for basic, water / electrical and full-service sites combined. This is despite the fact that only 42.4 percent of reservable site inventory is electrical. Clearly, customers seeking electrical sites are more likely to use the Parks Reservation Service. Full

Reservation Unit Night Sales



service site use has nearly reached its' capacity and is limited by the relatively few sites available (i.e. Manitoba Parks has 78 transient full service campsites, of which 75 are reservable).

Provincial Unit Night Sales Distribution

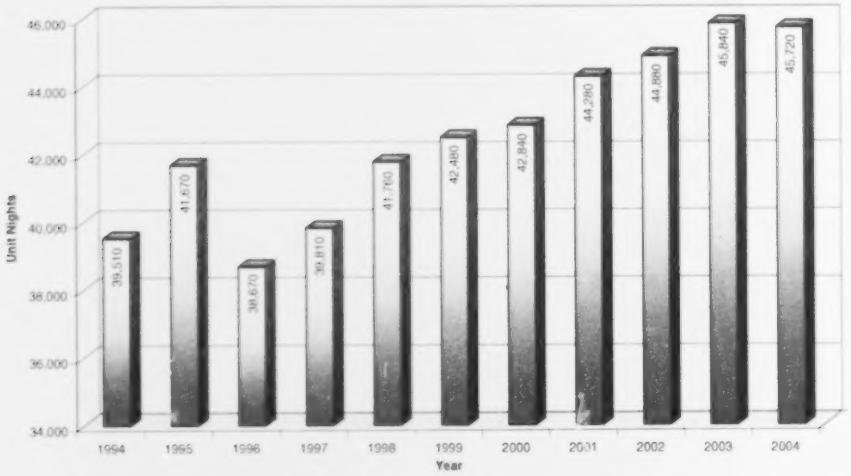


In terms of overall transient camping use (i.e. walk-up and reservation combined), 77,148 unit nights (45.7 percent) took place on weekdays, 55,937 unit nights (33.1 percent) took place on regular weekends and 35,704 unit nights (21.2 percent) took place on long weekends.

7.3 Seasonal Camping

Seasonal camping unit nights have grown steadily throughout the last decade, with an estimated 45,720 unit nights (1,524 seasonal sites sold) reported in 2004. The seasonal camping program has been undergoing a rationalization in recent years, in response to growing transient demand. Where transient demand warrants, seasonal sites have been converted to either walk-up transient or reservable transient status. It is felt that the Parks Reservation Service allows for the sale of transient sites many times over throughout the season, and that the combination of reservations and walk-up camping opportunities satisfies the needs of the largest number of visitors.

Seasonal Camping Use - 1994 to 2004



On a provincial level, this has not affected seasonal camping use, as site reductions have generally focussed on undersold capacity. However, there are a growing number of campgrounds where seasonal camping demand significantly exceeds available supply.

7.4 Group Camping

The collection of statistics on group camping remains in its' infancy in Manitoba Parks. Standard group permits, upon which use statistics are based, were introduced in 1999 and group permitting procedures are evolving. All 22 group areas, not including Paint Lake and Caddy Lake, are available through reservation only. In 2004, 834 group reservations were made. Permits indicate that 6,669 group unit nights were sold. It is expected that these figures continue to under-represent actual group use. Not all groups are being issued permits,

a reservation. In addition, a higher proportion of total unit nights is taking place on weekends, as the reservation service takes away the uncertainty of finding a campsite during busy times.

The Parks Reservation Service affords us the opportunity to examine the breakdown of transient unit nights on the basis of level of service. At 57.8 percent, demand for electrical sites continues to overshadow demand for basic, water / electrical and full-service sites combined. This is despite the fact that only 42.4 percent of reservable site inventory is electrical. Clearly, customers seeking electrical sites are more likely to use the Parks Reservation Service. Full

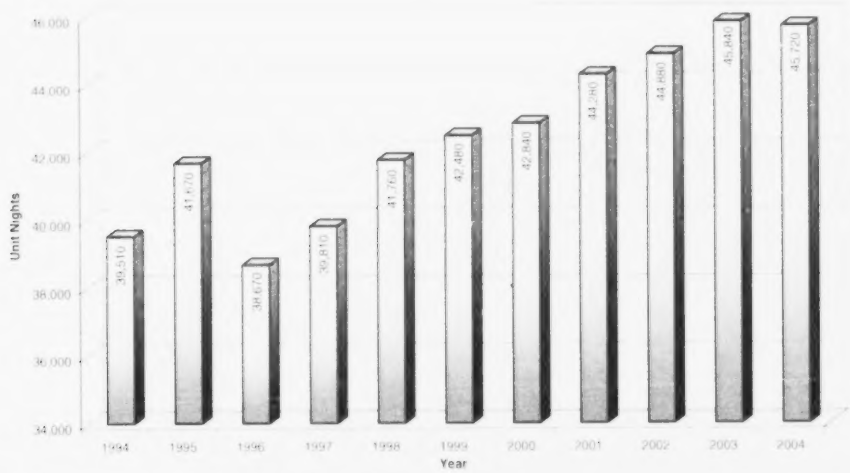
7.3 Seasonal Camping

Seasonal camping unit nights have grown steadily throughout the last decade, with an estimated 45,720 unit nights (1,524 seasonal sites sold) reported in 2004. The seasonal camping program has been undergoing a rationalization in recent years, in response to growing transient demand. Where transient demand warrants, seasonal sites have been converted to either walk-up transient or reservable transient status. It is felt that the Parks Reservation Service allows for the sale of transient sites many times over throughout the season, and that the combination of reservations and walk-up camping opportunities satisfies the needs of the largest number of visitors.

Seasonal Camping Use - 1994 to 2004

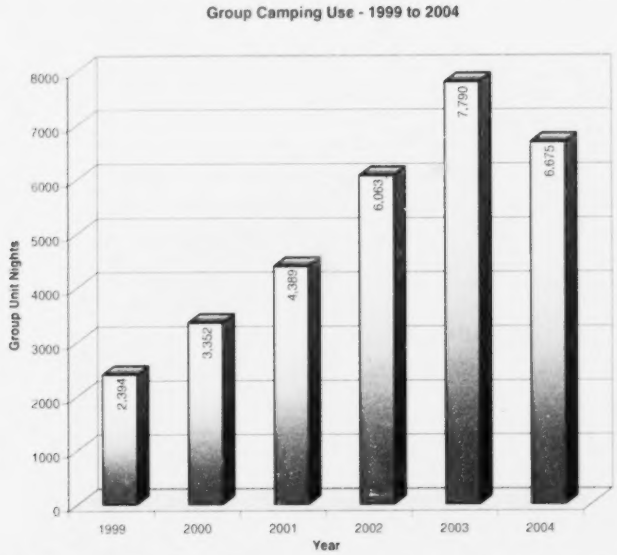


On a provincial level, this has not affected seasonal camping use, as site reductions have generally focussed on undersold capacity. However, there are a growing number of campgrounds where seasonal camping demand significantly exceeds available supply.

7.4 Group Camping

The collection of statistics on group camping remains in its' infancy in Manitoba Parks. Standard group permits, upon which use statistics are based, were introduced in 1999 and group permitting procedures are evolving. All 22 group areas, not including Paint Lake and Caddy Lake, are available through reservation only. In 2004, 834 group reservations were made. Permits indicate that 6,669 group unit nights were sold. It is expected that these figures continue to under-represent actual group use. Not all groups are being issued permits,

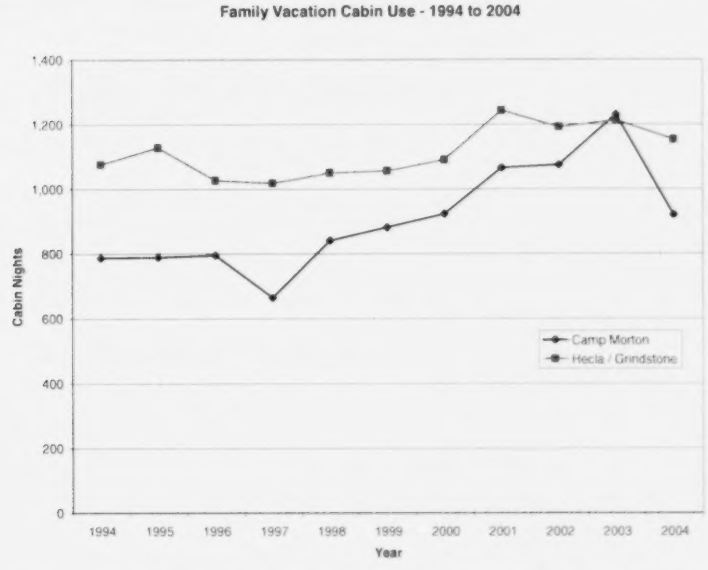
and many permits only include the minimum number of units required to make a reservation. Additional units are frequently not being tallied. Suffice it to say,



however, that group permitting procedures and the resulting statistics are expected to improve over time.

7.5 Family Vacation Cabins

Family Vacation Cabins are located in Hecla / Grindstone and Camp Morton provincial parks. There are 15 cabins at Hecla / Grindstone and 10 cabins at Camp Morton. In 2004, a combined total of 2,072 cabin nights were occupied at



the two locations (i.e. 920 at Camp Morton and 1152 at Hecla Grindstone). This is a decrease of 15.1 percent over the 2003 season, but up 1.1 percent from the average of 1994 through to 2003.

The Primary and secondary counter program was initiated in 1997. In order to estimate provincial totals for 1997 and beyond, complete the following steps.

1. Calculate the 10 year average as in columns M and N
2. Fill in the current year with accurate counts for as many locations as you can.
3. For each location that you have an accurate count, move the 10 year average to the 'Primary' Column
4. For each location that you do not have an accurate count, move the 10 year average to the 'Secondary' Column
5. Sum each column.
6. Calculate the weight factor for the secondary locations as follows.
   - (Primary + Secondary) / Primary
7. Multiple the current year total by the weight factor.
